Problem with slider position
Posted by domivan - 2013/02/19 16:43

I have a problem with the slider positioning.

I've just turned slider ON, and i didnt put anything else anywhere.

I'd want to "center" the slider to the content column, like the 1 and 2 (marked on the screenshots).

Thanks in advance.

Screens that may help you to help me.

http://imageshack.us/a/img845/147/sliderq.jpg

PD: Position 4 is where 1 and 2 are located.
I located SLIDER also in position 4, but it creates an empty space there, and floats at the right side.

I also tryed to locate the slider in other positions, but its worse xD.

Hello,

Provide a link to a page where we can see the slider.

Regards,
ARI Soft

I tried to upload it to 000webhosting but it takes too long, and it never ends...

Cant you help me if i specify the template?, or if i copy/upload here the php / css code here (index.php / template.css)

Send page files of a page with the slider by email. More information about it can be found here.

Regards,
ARI Soft

"Page files of a page with the slider"?...

I just have installed the Slider to my Joomla!, i went into Modules Manager, then i clicked on Position Button, and selected position 4.

What do you want me to send you?, templates.css (of the template site)... index.php of the template?, a screenshot of the module (localhost/administrator) config, or...?

Re:Problem with slider position

Posted by admin - 2013/02/19 18:20

Send all page files (including images, javascript and CSS files) not only one HTML file.

Regards,
ARI Soft

Re:Problem with slider position
Posted by admin - 2013/02/19 18:49

It is necessary to save ALL page files (not only one HTML file) into a browser like it is described here. For this select 'Web page, complete' option in IE browser or similar option in another browser.

Last time i already sent you the HTM file selecting the complete option...

I re-send you the complete option, and the ALL FILES option (last one).

Done.

You sent 2 HTML files and nothing more. We can recommend to create a new folder on your computer, use "Web page, complete" option to save the page to created folder (sub-folder with images, javascript and CSS files should be created in the folder), archive the folder and send archive by email.

Regards,
ARI Soft

We can save a page in FireFox browser with all page files. We described steps in our previous post. If you have a problem with it, upload your site to a public server and we will investigate the problem.

Regards,

ARI Soft

Thats a waste of time, if I could do anything else i'd be doing it, you don't need to REPEAT what you have said before once again.
"Follow the steps to copy all the pages" I already DID !!
"Upload your website to a public server" I already TRIED with 000webhosting and DIDNT WORK !!

Forget it, i'll use another slider.

Greets.

It requires to see the problem so we can investigate it. We offered two ways how we can do it. Instructions about saving a page into a browser is 100% working, but you sent not all files so it is not possible to investigate the problem.
