## HTTPS problem with images

Posted by velocisquirrel - 2013/08/06 17:03

---

Hi there,

ARI Slider is great about inserting image code with relative paths, but for some reason later in the source it inserts more code that refers to other images(?) with http:// URLs. This is causing some security errors on our HTTPS site. Can anybody tell me how to get these other bits of code to either be relative, or refer to HTTPS URLs instead?

Here's an example of the code I'm talking about -

Thanks for any help!  
Christiana

Do I need to pay for the product again to download the latest version? I have 1.9.1 but Joomla says there are no updates for it. On the Ari-Soft site I can only see where to re-purchase it.

Thanks,  
Christiana

The latest version of the extension is always available in "Member Area" on our site.
