Image Links not working
Posted by sidoniemay - 2014/09/08 04:00

_____

I have created an image slider with two images, which works perfectly!!

Created the ini file and loaded it into the directory with the images. I know the ini file is being read as I can change the description of each slide and it changes accordingly, however the links I've setup don't work. What have I missed?

The site is www.neemhall.howlingmouse.com.au

This is my ini file.

Slide_1.jpg="This will link to the Shop"
Slide_2.jpg="This will link to the Contact Form when it is created, just defaulting to home page at the moment."

Slide_1.jpg="http://www.neemhall.howlingmouse.com.au/index.php/shop"
Slide_2.jpg="www.neemhall.howlingmouse.com.au"

_____

:laugh: Well it looks as though the issue is with IE and not this extension!! Imagine that ... IE being a pain :S

_____

Hello,

The titles are shown fine in IE for us.

Regards,
ARI Soft
