
Conflict with JSE Mega Drop Down Menu

Posted by clarewaterfall - 2014/11/12 17:53

Hi, I hope you can help. I want to add the JSE Mega Drop Down menu about the ARI Slider. The Slider was positioned fine until I 'published' the menu and now the slider is pushed way over to the right and isn't directly under the menu.

I have switched J Query to no but it still isn't showing in the right place.

Any advice would really be appreciated. I'm supposed to finish the site tonight and now I'm stuck :(

Hello,

Where we can see the problem?

Regards,
ARI Soft

This problem with site template styles. Add the following CSS rule:

`BODY #nav > div.inner{height:45px;}`

I'm so sorry to be stupid but where do I add them? In the CSS area of the ARI Image slider module or directly editing one of the .css sheets of the extension?

In "CSS Styles" parameter in module settings or in a site template CSS file.

Hi,

I've added the code you provided into the module css (screenshot attached), it didn't work so I added it to the default css of my template and that hasn't worked either?

Thank you for your continued help. I'll send another post with the screenshot of the code in the default css. <http://www.ari-soft.com/images/fbfiles/images/defaultcss.PNG>

Your code is incorrect. Copy code which we sent. Don't modify it or add any extra symbols.

Regards,
ARI Soft

I've now copied the code directly into the module css without changing it, that didn't work so I copied the code directly into the default css and that didn't work either.

Thanks

We don't see the code in HTML source of the page. Clean browser's and Joomla! cache.

The code works fine for us:

I'm sorry and I'm sure you're getting impatient with me but I don't understand what I'm supposed to change. I've folloed your instrcutions:

Added without chaging the code to the css module and the templates default css file: template > cascade > css > default.css

I've cleared the cache and it's just not working for me? What did you change your end to get it to work? could you send me a screenshot of the change you made in the code or module so I can replicate it exactly?

I'm sorry again. I'll happily give you access if that would help?

Thanks
