## Drop shadow disappears?

Posted by Dakota09 - 2015/03/14 20:53

---

Hello. just noticed on a new Joomla 3.4 site I am building that on two different pages where the slider is installed, if I turn "Show Slides Navigation" to off, the drop shadow disappears.

Thoughts on a solution?

Thanks so much!!

Hello,

Send a link to a page where the problem occurs.

Hello, here are two pages. The slider is on the top of every page too.

Hello,

The sliders look the same on these two pages. A shadow around the slider is absent because you use modified extension (at least CSS file differs from original CSS file). You can install the original version of the module to return back shadow around the slider.
