Change location of images in menu
Posted by raholt - 2015/06/01 22:59

Hello,

Images Location: Your instructions say, " If you want to add new images, copy it to /modules/mod_arislider/includes/js/img/slides/ folder."

Can I change the location of the images and tell AriSlider to look in my images folder of the template as an example instead of the module images folder?

Thank you,

Ron

Hello,

It requires modification of the extension. The path to folder with images is defined in /modules/mod_arislider/mod_arislider.xml and /modules/mod_arislider/tmpl/menu.php files.

Regards,
ARI Soft

Hello,

I found the files and am looking at the code. Not sure what to change.

I want Ari to look at the images that are in this directory.

/home/mtecom/public_html/images/MeetTheTeam/

So based on your answer where would I place this?

Ron

Hello,

Change value of "directory" attribute for elements with type="imagelist" in /modules/mod_arislider/mod_arislider.xml file. For example replace the following string:

with the following one:

and replace the following code in /modules/mod_arislider/tmpl/menu.php file:

$imgAttrs = array('src' => JURI::base(true) . '/modules/mod_arislider/includes/js/img/slides/' . $img, 'alt' => !$enableTip ? $dataItem : '');

with the following one:

$imgAttrs = array('src' => JURI::base(true) . '/images/MeetTheTeam/' . $img, 'alt' => !$enableTip ? $dataItem : '');
