not using ini file

Posted by BevStone - 2015/07/07 21:28

_____

I created the imageslider.ini file and placed it in the folder with my images and put the name of it in the "Description file" space but it does not seem to be being used. The descriptions and links are not showing up on my site. I suppose I am missing some small critical thing.....

The site is http://mailboxclub.org/J336/

Thanks!

_____

Hello,

The INI file has an incorrect format. Replace the following line:

4.png="http://www.mailboxclub.org/J336/index.php/media/videos'

with the following one:

4.png="http://www.mailboxclub.org/J336/index.php/media/videos"

Check also that "Description file" parameter in module settings is populated with image slider.ini value (default value ariimageslider.ini, but your INI file has name image slider.ini).

Regards,
ARI Soft
