
ARI Slider Question - Thumbnail Size

Posted by ponyack - 2010/12/06 23:47

Hi,

Just purchased the mod and it works well. I send an email about changing the size of the thumbnail - I was told this could be done in the css - which lines of code would I need to modify to get 100x100 pixel thumbnails?

Thanks

John

Hello,

If you want to apply this modification to all module instance, add the following CSS rules to site template CSS file or to /modules/mod_arislider/includes/js/slider.css file:

```
div.ari_slider .ari_slider_menu ul li
{
width: 100px;
height: 100px;
}
```

```
div.ari_slider .ari_slider_menu ul li.act,
div.ari_slider .ari_slider_menu ul li.act:hover
{
background-image: url(img/active_bg100.png);
}
```

and copy active_bg100.png file from attach to /modules/mod_arislider/includes/js/img/ folder.

Regards,

ARI Soft http://www.ari-soft.com/images/fbfiles/images/active_bg100.png

Hi,

Thanks for the quick reply - this should do the trick. And keep up the good work, this MOD works like a charm & I will make a positive review at Joomla.com

EDIT: I applied the code and its almost there - the navigation bar height needs adjustment - can you help

Link to sample: http://ponyack.com/index.php?option=com_content&view=article&id=27&Itemid=30

Thanks,

John

Hello,

Could you provide link to page where we can see the problem?

Regards,
ARI Soft

Add the next CSS rules:

```
DIV.ari_slider .ari_slider_menu
{
  height: 100px;
}
```

```
DIV.ari_slider .ari_slider_menu ul li a
{
  height: 90px;
}
```

and modify /modules/mod_arislider/includes/js/img/panel.jpg image that it has height equals to 100 pixels.

Regards,
ARI Soft
