
Mixed Gallery

Posted by bloggered - 2011/02/10 13:47

Hi I just bought the software and wished I could have documentation that is structured. If there is one please reply thanks.

Now can this software, create a gallery OF pictures, and each of this picture can be either youtube video and inline content with picture? I am trying to create a gallery of customer testimonials so when someone clicked one of the thumbnail either video or test with picture pops up.

Can this be done or I got the wrong software?

Hello,

Mixed gallery can be created if add each gallery item one by one. For example code for thumbnail which is associated with YouTube video looks like:

```
{arisexylightbox activeType="rcontent" width="800" height="450" url="http://www.youtube.com/watch?v=WyA1dzfKywg" title="Video"}{/arisexylightbox}
```

Where LINK_TO_THUMBNAIL is link to necessary thumbnail.

If necessary to associate thumbnail with inline content, code looks like:

```
{arisexylightbox activeType="icontent" width="300" height="250" title="Hidden text"}
{link}{/link}
{content}Inline content which you want to show in sexy lightbox goes here.{/content}
{/arisexylightbox}
```

Is it suitable for your needs or you mean something another?

Regards,
ARI Soft
