
Close Lightbox from within Script?

Posted by stagemgrjon - 2011/03/03 02:26

I am using the lightbox as a frame for sending an eMail to one of our members using our own custom code. Is there any way in my own code that I can force the lightbox to close once they have sent the eMail?

Hello,

The following javascript code can be used into iframe that close lightbox:

```
parent.window.close();
```

For example the next code can be placed into iframe content that add link which will close lightbox:

Close

Regards,
ARI Soft
