
Lightbox inside iframe

Posted by dommaster - 2011/03/16 07:29

Hello

Just bought, Great module, very extensive.

I have a slight problem, im activating the lightbox from within an iframe using;

Hello,

The lightbox shows in window where it is called. It means if it calls in main window, the lightbox will be shown in main window. If it calls in frame window, the lightbox will be shown in frame window. The extension doesn't provide ability to change window where it will be shown.

Regards,
ARI Soft

Thanks for the quick response... I need it to act like a popup or it is redundant for me...

Any way of altering this?

I used this popup code which worked. Can lightbox be incorporated somehow?

We will investigate possibility to add this feature. If it is possible we will provide custom version of the extension by email.

Regards,
ARI Soft

I would appreciate that as my shopping cart is hinged on this.

On JED it says: ARI Sexy Lightbox is Joomla! lightbox module which provides possibility to show image galleries, Flickr galleries, Picasa albums, Joomla! articles and modules, external pages, HTML content, YouTube and Vimeo video, Flash files (SWF and FLV) in sexy popup.

So I thought it would work straight out of the box.

Thanks

The extension supports all described features. FYI, most of javascript lightbox works in way as "ARI Sexy Lightbox", it shows lightbox in window where it is called.

I see that now, I just hope there is a solution, I don't want to buy another plugin if at all possible...

Thanks

Unbelievable I am very impressed, thought it would take days for a result.

That worked great, first it tried opening a tab but after a refresh... bingo success!

Well done you have converted another believer....

Thanks
Dom
