## How can I open a lightbox with JQuery/Javascript

Posted by MIDAS - 2011/04/26 13:20

---

Hello!

How can i open a lightbox by using JQuery command (open on page load) ?

regards,  
Nick

"ARI Sexy Lightbox" module provides ability to show the lightbox on page load. Use "Open on load" parameter for this purpose. If you want to use javascript, code will look like:

```
jQuery(window).load(function() {  
    if (typeof(SexyLightbox) == "undefined")  
        return ;
```

```
    SexyLightbox.show("Title", "http://www.ari-soft.com?TB_iframe=true&width=500&height=300", "");  
});
```

Hello!

Thank you for the fast answer, works fine!  
Exists a documentation how to use with JQuery/Javascript?

Thanks!

What means the last parameter?  
... ght=300", "");

---

This is internal parameter and used when the lightbox is called by click on a HTML element.
