Images now opening in lightbox

Posted by Basstrup - 2011/04/27 13:24

_____

I have been trying to get this to work

version 1.8.25 J 1.5.22

I am using mod_arisexylightbox and the module creates the thumbnails nicely, however when click on an image the large image appears in the window, not in a lightbox.

All plugins are activated.

site link is

Hello,

It seems this problem with "JB Library" plugin. The plugin can't work when several jQuery instances are used on a page. Disable the plugin or contact plugin's developers that they fix it.

PS: If you provide temporary access to your Joomla! backend by email, we can try to fix "JB Library" plugin.

Regards,
ARI Soft

_____

That was what I was afraid off

sending email

thanks for your always fast response

_____

I fixed it,

your pointer helped. Joomla Bamboo's plugin JB Library has a setting "Lazy Image Load" that has to be set to "Disabled" then the light box work
