
PDF Document inside lightbox

Posted by harlequinfloors - 2011/05/15 15:23

Hi,

If I try to call a PDF, the lightbox appears and then it asks if I want to save the file or open it in Adobe. What I'd really like to happen is the PDF is displayed inside the lightbox.

Is there any way to display a PDF document using the lightbox anywhere plugin?

Thanks,

=====

Hello,

It is not a lightbox problem. If PDF extension is not installed for a browser, browser will offer to save PDF document. ARI Docs Viewer plugin can be used that show PDF documents. For example, you can create new article and use "ARI Docs Viewer" plugin in this article for embedding necessary PDF document and load created article into the lightbox.

Regards,
ARI Soft
