
Width 100%

Posted by timtenn - 2012/07/12 16:00

I need to set the module width to 100% so it fits and centers correctly on the iphone and website. However, when I do this, the images becomes offset outside of the module. How can I fix this?

<http://logochairs.com/j25cms/index.php/product-lines/chairs/deluxe-chair-item-12>

Image of settings attached. Images will be used as thumbnails created at 275x275 px. <http://www.ari-soft.com/images/fbfiles/images/Capture-17ba24a4e63658591557b6ecddfe0984.JPG>

Hello,

"ARI Image Slider" doesn't support value in percent for "Width" and "Height" parameters. It accepts values in pixels.

Shouldn't the module be flexible like the rest of the site? Is this a modification that can be made in the future? Websites are viewed on many platforms that size things differently, namely mobile devices.

The module doesn't support percent values for "Width" and "Height" parameters. We will think about implementation this feature in a future release.

hi, just wondering if there has been any more consideration to the "width 100%" parameter that would allow better implentation on mobile and table devices??

Hello,

Could you specify what code you use and what problem appear?

I am using the following code:

You can see it on the bottom left of the homepage www.kickstart3d.com.au

When someone opens the link on an ipad/table/smartphone - is it possible to get the width to adjust so that its 100% and fits to the screen size that the viewer is using at the time?? I just noticed you mentioned 6 months ago that you were looking into it for future versions.

Thanks, Fin

It is possible to use percent values for width and height parameters. For example set it to width=100%
