
Module display problem

Posted by Cookpass - 2012/12/07 11:03

Hi there.

I seem to have a problem with the module on my 2.5.6 Joomla site. I think it's a css problem or some other plugin because when I try it on a brand new fresh Joomla install, it works properly.

Basically when I click the thumbnail I created in the module, instead of the nice modal, it opens up the full sized image in the same full page browser page/tab as you start in, in Firefox with a black background and in IE9 it has a white background.

Can you help please?

I can provide login details if required.

Many thanks.

Hello,

Where we can see the problem? You can send a link by email.

Regards,
ARI Soft
