
Form in Lightbox

Posted by kshayne - 2012/12/11 09:31

I'm using RSForm and the goal is to have a lightbox that contains a form.

The only way I know how to utilize the form is to have it as a module. Then I need to create a module for the lightbox. Please go to www.TranscendAging.com/tvnews to see what's happening. You'll see a lightbox but it displays as a small box/icon on the left side of the page. So, what I tried previously was to setup the lightbox choosing an article. The box then opened but the content was still the box and not the content/form itself.

In addition, I'd ultimately light the box NOT to close until the form is filled out and submitted. Not sure how I can accomplish that or even it is possible.

This seems like a pretty normal desire. The idea is that to play the video they need to fill in the lightbox form and submit it. Then they can watch the video.

Any assistance would be excellent.

Thanks,

Kevin

Ok - I solved 80% of my problem by making an article with the plugin code for RSForm. Then I connected the lightbox to that article.

My only challenge now relates to eliminating the CLOSE and make the box close only after fields have been submitted.

Any ideas?

Thanks,

Kevin

Hello,

The extension doesn't provide ability to hide and show close button in the described way.

Regards,
ARI Soft
