Gallery doesn\'t fit to page size

Posted by sainthout - 2013/01/02 16:48

_____

Hi,

I have a problem with displaying a gallery of pictures.
On Chrome everything seems fine and all resizes when viewing on a less resolution screen.
But on Firefox and IE, nothing resizes and some pictures are even out of screen.

I'm using Joomla 3.0 with it's own Module plugin to put the gallery inside of an article.
The URL is: http://www.knoflookenlemmetje.com/index.php/foto-s

Is this fixable? As I would like to display it on mobile screens (Android browsers and iOS) too.

Thanks,

Sander

_____

Hello,

When "Simple gallery" layout is used, thumbnails are shown in a HTML table with defined width and height.

We will investigate ability to add a responsive layout and add it in a future release of the extension.

Regards,
ARI Soft

_____

Why not set the gallery container CSS class to one with a percentage based width?

_____

We will investigate ability to add a responsive layout and add it in a future release of the extension.

I am using ARI Sexy Lightbox 1.10.5 now.
Does this version cope with a responsive layout?

I want to know the method which makes the following code cope with a responsive layout;

_____

Hello,

It is possible to use percent values for "width" and "height" parameters. For example:
