Customize the Frame

_____

Hi,

Is there a way to add another module(or plugin) into the frame of a lightbox. Specifically I am trying to add audio player controls.

I want to have the lightbox display html pages (or articles), and embed audio files which push to the player.

with each new page, a new associated audio file would be available.

The reason here is I don't wish to instantiate a new player with every new page inside the lightbox.

Many thanks!

Hello,

Embed an audio player to articles which are loaded into the lightbox.

Regards,
ARI Soft
