Flowplayer HTML5?

Posted by jlafferty - 2013/01/29 18:32

Hi Folks,

I believe the Flowplayer that is used within Lightbox is the flash only version.
I would like to insure compatability with Android and Macintosh based devices if at all possible.

Can you confirm that the Flash only version of Flow player is what has been integrated, and if so, is there an option and/or plan to switch to the HTML with Flash fallback version?

Thanks for such awesome software and great support, you guys ROCK!

Jeff

Hello,

The extension uses tag for HTML 5 compatible browsers and mobile devices to embed MP4 files.

Regards,
ARI Soft
