\"System - ARI Sexy Links\" not work with register

Posted by smolny1 - 2013/02/26 17:39

Hello,

I am trying to make a login and register form pop up in lightbox, but it doesn't work (checked mozilla, chrome and ie).

Here is the link:

please press the register button to check it (it is below the header and above big slideshow)

The lightboxframe pops out, and then component starts to load content and then it's displayed on seperate window.

I would appreciate some help.

With regards

my settings:

"A.registerblock"|width=800&height=600&tmpl=component

my link:

uRegister

Hello,

Could you provide a link to a page where we can see the problem?

Regards,
ARI Soft

This problem with an extension which adds the following javascript code to pages:

window.addEvent('domready', function () {if (top == self) {document.documentElement.style.display = 'block'; } else {top.location = self.location; }});

We suppose it is a system plugin. If you provide a temporary access to your J! backend by email, we can investigate this problem in more details.

Try now please. The code was added by Joomla!. We modified /components/com_users/views/registration/tmpl/default.php file and commented the following code:

JHtml::_('behavior.noframes');

It works great, so if I want to show login in popup later, I have to modify the view login too ?

p.s: You have a very fast and good support I will sure add a good comment about your service
