Lightbox renders poorly

Posted by Jonathanne - 2013/04/15 15:33
_____

ARI,

I am using the module from sexy lightbox and get the rendering in the attached pictures. The right side is missing some border.

My first rendering is of a flash (.swf) file sized 800 wide and 200 high. I set the module to be 914 by 230. But the top and bottom "bars" have code that makes them longer (width: 928px):

element.style {
position: absolute;
width: 928px;
z-index: 32002;
background-image: none;
overflow: hidden;
background-position: initial initial;
background-repeat: initial initial;
}

Making it 914 shrinks the width to the right width for both bars but the SLB-Background width at 914 needs to be 907 to line up the right side. But making these adjustments "un-centers" the lightbox.

See joomla.jlnarducci.com for this problem.

The Article image is just to show that it occurs with a different type and the problem occurs with an iPad and it occurs on the laptop with Chrome (primary) Safari, Firefox and IE10.

Let me know if you need more info.

_____

Hello,

Do you use "ARI Sexy Lightbox" module, "ARI Sexy Lightbox Anywhere" or "ARI Sexy Lightbox" plugin?

Embed SWF file, not inline content into the lightbox. Documentation is available here.

Regards,
ARI Soft

_____

Ari,

I'm using the Ari SLB Module.

I created a custom html module called "Test." I put the following code in the custom html option:

which points to a swf file. Published the custom html module to a non-template position called "quizlocation."

Then I created a ARI SLB module published to "grid1" location which is a valid template position. I choose type "Module." Choose sizes mentioned before. Choose "Test" as the module to be displayed in the lightbox. Choose "Pop Up Quiz" as the link text.

Works fine except for the rendering.

Not using inline content option.

What's wrong? What part of the documentation?

_____

Set "Choose source type" parameter to "Remote content" and set "Remote content -> URL" parameter to the following value:

Mydirectory/Project4.swf

_____

Ari,

Same problem when I use remote content for the swf file.

Tried with images as the type. For Caption template use your first two options {$Title} and your csv file. Used my directory for images. Used keep image size and Self window as parameters and thumbnails work.

The picture overflows the bottom of the lightbox. If the image is smaller than the one in the attached image then the bottom overlay extends beyond the box on the right. But the border seems to work fine.

See picture as I'm going back to the swf file as input.

_____

This problem with site template styles. It contains global CSS rules for some HTML elements. For example the following CSS rule:

div,
ul {
  -webkit-box-sizing: border-box;
  -moz-box-sizing: border-box;
  box-sizing: border-box;
}

It is not a good approach. Add the following CSS rule to fix the problem:

#SLB-Wrapper,
#SLB-Wrapper DIV
{
  -webkit-box-sizing: content-box;
  -moz-box-sizing: content-box;
  box-sizing: content-box;
}

_____

Ari,

You got it. Thanks. Seems to work fine.
