Create new theme \"German White\"

Posted by bvneck - 2013/06/13 08:01

_____

I want to create a new theme for the ARI Sexy Lightbox Plugin called "German White" - obviously I want to translate the text "next" and "previous" and "close" into German. How can I do that?

_____

Hello,

We can send Photoshop source files by email which you can use to create a new theme.

Regards,
ARI Soft

_____

I don't think I need photoshop files - I see now that I can change the "button.png" to fit my language.

Still: can I simly add a new theme by copying the "white" folder in the "js/sexyimages"-Folder? Or can I do so as a template override?

_____

It is enough to create a new sub-folder in "js/sexyimages" folder. It will be available in module/plugin settings.
