Sexy Lightbox modal not opening properly

Posted by Nicharee - 2013/08/06 11:31

Hi, I am trying out Sexy Lightbox (for which I have a license already) on as site which I just start implementing (J 3.1.5) and ultimately I'd like to use your extension also with ARI Zoom. But before buying ARI Zoom I see already (see test site on http://ihome.ixxtest.com, gallery is right below the home page slideshow) that I either made a configuration mistake or there is a script conflict already as the modals do not open properly. ?!

The template (HOGASH "KALLYAS" template) is "quite advances = many scripts" which sure means that there is a high chance of getting conflicts when adding even more extensions.

Any advise/opinion if I made a mistake when configuring or a conflict?

If I manage to get this working then I would try and add ARI Zoom and hope it still works... ;)

THANKS

Hello,

Could you specify what plugin code or module settings you use?

Regards,
ARI Soft

Thanks, I use the module here and just set the directory path of the image location and left all other settings as is. I just set the "include jQuery" option to "no" because if I don't do that then I have conflicts which screw the site.

The Plugins "System-Ari Extensions" and "System-Ari Lightbox" are enabled.

Could you send screenshot(s) of module settings page by email?

Regards,
ARI Soft

Images in /images/sliders/common/ folder have 150x60 dimension so they are shown in original size into the lightbox or you mean something another?
