
Video doesn't worl after deinstall / install

Posted by StefanS - 2013/08/22 16:37

I had to deinstall and then resinstall the ARI module and plugins.

Everything looks fine except the Video doesn't load, only the thumbnail picture is displayed. When hovering over the thumbnail, only the picture link is shown (shouldn't it be the link to the youtube-video?).

All plugins and module are enabled.

Here's the code:

Here's the page: <http://integraleimpulse.de/ii3/video-test.html>

When this is fixed I'd like to know how to disable all animations for the lightbox except a simple zooming in or out.

Could you pls provide an example?

I have no idea, what all the options mean and I am annoyed testing them all out.

Thx.

Hello,

Try to temporary disable "ARI Sexy Thumbnails" plugin.

Regards,
ARI Soft

Great!

Disabling Thumbnail-Plugin does it. :)

But reenabling reinvents the same error. :(

How about disabling the animations?

Any tip how I can achieve that?

Thx!

It is necessary to change plugin ordering. See "Ordering" parameter in plugin settings. "ARI Sexy Thumbnails" should go before all other "ARI Sexy Lightbox" plugins.

About animation, set "Show duration", "Move duration" and etc. parameter to 1.

Thank you so much for your quick answer!

Thumbnail is the first plugin in the list.

The animation now is kind of a 'flickering' what is not what I'm looking for.

How shall I set the parameters to have the lightbox gently zoom out from the center (and not shake or something)?

Could you provide a temporary access to your J! backend by email so we can investigate the problem with thumbnails?

PS: We can also help to configure the extension to avoid animation.

Regards,
ARI Soft

Thank you fro fixing the issue with the module.

Could you please also give me a hint how to disable the animation for the lightbox so that it onlie zooms out from the center?

Thx!

It seems animation is disabled on your site.

No, all numeric parameters are set to '1' (according to your advice.). This leads to the box showing up for a split second 'big' and then in its final size, what has this 'flickering' effect.

I would like the boc smoothly zoom in from the middle.

Could you please provide the according parameters?

Or provide a documentation what all the parameters mean? Finding out by try & error is quite annoying.

Thx,
Stefan

Set "Resize effect" parameter to "Swing" and "Resize duration" to 500
