## 1 trigger for all articles?

Posted by Internaut - 2013/12/04 19:57

---

Is there a way to use a keyword like "Read more..." or better still, the system\_readmore as the trigger to open the box?

I am not having any success with this method. We will have different authors. It would be great is when they enter an article/item that they don't have to find and copy code.

The samples with the { and } are not accepted as code in html source - they show up as text.

Or, describe please, how to find the CSS Selectors?

I have lightbox, lightbox anywhere, sexy links, and can't seem to figure out how to use just one trigger, without having to add code to each article headed to a lightbox.

Hello,

Do you want to add the lightbox to all links with "system\_readmore" CSS class?

Hi,

Yes, however, the template has K2 involved using their "Items" but if you can show me how to link system\_readmore" I can probably figure out K2s.

Than ks

U guys are fast!

You can use "ARI Sexy Links" plugin for this purpose. Set "Elements CSS selectors" parameter to the following value:

"A.system\_readmore"|width=800&height=600&tmpl=component
