## not working on tablet

---

Hi,

I try to make a .mp4 file playing with Arisexylightbox plugin working on a tablet. I can play the .mp4 file on a tablet with a video player but when I use Arisexylightbox I got the "A plugin is needed to display this content" message.

How can I make a .mp4 file work with Arisexylightbox on a tablet? Do you see why it isn't working?

I use the latest Arisexylightbox version.

My test site is here (click on the top film icon).

Thanks, Marsm

Hello,

What tablet do you use (with Android or iOS or something another)?

Regards,  
ARI Soft

I use Asus Nexus tablet with Google Android OS and Chrome.

On my site (click here) left you see the .mp4 working on the tablet with jwplayer, next to it a film icon. When clicking on this icon AriSexylightbox appears and the .mp4 doesn't work on the tablet.

Do you see what the problem is?

Thanks.
