Image to open module in lightbox

Posted by rjunior - 2010/06/15 22:32

_____

Hello,

I am trying to utilize an image instead of text to link to a module within my site.

Currently, I can use:

 {arisexylightbox activeType="module" width="900" height="600" id="" link="Show Joomla! module" title="
 "}{/arisexylightbox}

where "link" is text. I want to use an image instead.

Is this possible? If so, can someone help me figure this out?

Thanks in advance!

_____

Hello,

We have updated the extension, download and upgrade 'System - ARI Sexy Lightbox Anywhere' plugin, please. Then you can use the following code:

{arisexylightbox activeType="module" width="900" height="600" id="" title=" "}{link}{/link}{/arisexylightbox}

where is path to necessary image.

Regards,
ARI Soft

_____

Sorry, but where do I find the upgrade? Is it just in the zip file in my "members area"?

_____

Yes, download zip archive in 'Member Area', unzip it and install 'ARI Sexy Lightbox' module and 'System - ARI Sexy Lightbox Anywhere' plugin again. Upgrade process doesn't require to remove the previous versions.

Regards,
ARI Soft

_____

I have tried this and it does not seem to work for me. Inline text works fine, but image link does not seem to work; I get the Lightbox code instead.

_____

Hello,

Could you provide link to page where we can see this issue and temporary access to your Joomla! backend by email that we can investigate this problem?

Regards,
ARI Soft

_____

It seems you copy-pasted code into a WYSIWYG editor and editor changed code. Insert code in plain text mode, please, or provide temporary access to your Joomla! backend by email and we help.

Regards,
ARI Soft
