## Rel atribute to data-rel conversion?

Posted by Jeroen574 - 2014/05/14 13:23

---

Hello there,

I have tried tot change the Rel atribute in the html to a data-rel Atribute but this breaks the code.

Can you tell my how to do that than it is valid html 5.

I have changed it in class.SexyLightboxImglstModel and a couple other files but no luck.

Kind regards,

Jeroen J.

---

Hello good not find the e-mail was bought in a other name do have the download details but to make things easy I bought a new one.

I also have the old problem you solved for my in version joomla 2.5 it is back in joomla 3.1 version. this is the link to that problem:

<http://www.ari-soft.com/ARI-Sexy-Lightbox/43718-IE-8-Doesnot-work-well-21-px-top-and-left-overflow.html>

I will send you the website url where the problem is by e-mail. allong whit the order number..

## Re:Rel atribute to data-rel conversion?

Posted by Jeroen574 - 2014/05/14 23:06

---

It is not exatly the same problem as last time with the 21 px top and left.

Now the lightbox is not showing at all in IE8 but it does when i use the source file but then it does not play the images auto.

Kind regards,

Jeroen

## Re:Rel atribute to data-rel conversion?

---

Posted by Jeroen574 - 2014/05/14 23:38

---

I was mistaken it is like the 21px isseu.  
But I had to put this code at the end of

```
;(window || jQuery)(document).ready(function(){
SexyLightbox.initialize({"hoverDownloadLink":false,"enableShow":true,"autoStart":true,"continiousShow":true,"continious":
true,"color":"white","showDuration":4000,"moveEffect":"easeOutBack","resizeDuration":30,"resizeEffect":"easeOutBack","
shake":{"transition":"easeOutBack"},"dir":"\modules\mod_arisexylightbox\includes\js\sexyimages","overlayStyle":{"opac
ity":"0.8"}}); });
```

jquery.sexylightbox.min.js it is the same as jquery.sexylightbox.min.js only with that at the end I use a script merge  
plugin and there for the

loading order is important. If you want I can disable the script merge plugin for you. Then the behavior is the same. it is  
drifting in IE8.

=====

## Re:Rel atribute to data-rel conversion?

Posted by Jeroen574 - 2014/05/14 23:47

---

I have disabled the scriptmerge plugin now.

The width in IE8 is 21px to big if I put a class at the overlay div and say width 100% the problem is corrected.  
Not really because I have to use the source files and than the lightbox doesn't auto play.

And the other isseu I had is that I would like to transform rel atribute to data-rel atribute so i can make it valid html 5.

Kind regards,  
Jeroen.

## Re:Rel atribute to data-rel conversion?

Posted by Jeroen574 - 2014/05/15 14:20

---

:woohoo: Hello ther thank you very much for the file it works like a charm!!!

I took a bit long because my scriptmerge plugin had a error with compression it errassed everything after "// and it should  
not do that because then it errased a part of your code. But I fixed it now. So everything is working fine now with data-rel  
in place.

I still have a little isseu with IE8 it does seem that it is not callculating the y scroll bar or something the width is not right.  
There are 21 px to much just as much as a scrollbar... So the sexylightbox is searching for the right place to saddle. it  
drifting a bit..

You did solve this problem before but that solution i can not use because it was for joomla 2.5 and now i am in joomla 3.0.  
I am very glad that you solved the data-rel issue so if you do not want to look in to this I am totaly oke with that ofcourse.  
Can you let me now? Or do you want my to make a new topic of this?

Kind Regards,  
Jeroen J. :woohoo:

## Re:Rel atribute to data-rel conversion?

Posted by Jeroen574 - 2014/05/15 15:05

---

I have optimized the site I mean I put the scriptmerge plugin to on and placed some extra code. But that does not effect the problem I discibed.

But if you like so I can turn off the script merge plugin here you can see the problem in IE8 mode. <http://www.heijer-onderhoud.nl/markiezen-hout.html>

Thanks for looking in to this!

Oh I see now it does affect it a bit turning on the scriptmerge plugin it is now not showing in IE8 only the overlay. In the other modes its is working oke... I will turn of the script merge plugin now than you can see it like it is... Please wait a second with checking it I have to find out what is making it not apear in IE8 it is something i did so I have to change it back or somthing like that.. I let you now when i am ready... sorry...

## Re:Rel atribute to data-rel conversion?

Posted by Jeroen574 - 2014/05/15 16:43

---

:) Hello found out what was not working any more in IE8 I used two codes 1 caused IE8 to display nothing only the overlay.

But now I Use the code that works 2 so now you can see what I mean again. O the code the plugin is creating does also makes IE8 not show anything but the overlay the sexylightbox is I believe above the visable screen if you put the standaard code script on. This is the code I am talking about:

Code 1:

```
;(window || jQuery)(document).ready(function(){
SexyLightbox.initialize({"hoverDownloadLink":false,"enableShow":true,"autoStart":true,"continiousShow":true,"color":"white",
"resizeDuration":50,"dir":"\modules\mod_arisexylightbox\includes\js\sexyimages", "overlayStyle":{"opacity":"0.8"}});
});
```

And this is the code taht does work also in IE 8 Code 2:

```
;(window || jQuery)(document).ready(function(){
SexyLightbox.initialize({"hoverDownloadLink":false,"enableShow":true,"autoStart":true,"continiousShow":true,"continious":
true,"color":"white", "pauseDuration":8000,"showDuration":800,"moveEffect":"easeOutBack", "resizeDuration":50,"resizeEff
ect":"easeOutBack", "dir":"\modules\mod_arisexylightbox\includes\js\sexyimages", "overlayStyle":{"opacity":"0.8"}});
});
```

So now You can take a look if you like... :unsure:

I still have the scripmerge plugin turned off but this was not causing it not to display in IE 8 as you can understand now. The pauseduration is not nessasary I just put that in the screen goes black faster... and the image stays longer on the screen.

The thing that is helping is I believe the showduration..

## Re:Rel atribute to data-rel conversion?

Posted by Jeroen574 - 2014/05/15 19:52

---

Yes it is just a little glitch I am cleaning up this site and this got my eye. I had the same problem last time as had other people but then it was drifting out of the screen now it is just a bit slow to find it position in de middle but you will notice that the x-scolbar is there on IE8 mode and there is no x-scolbar in the other modes like IE9 or IE7 or IE10 and when the width is correct it works likes expected whitout the glitch. I understand if you do not find it important maybe you can put the fix in the next version? Here you solved it: <http://www.terraverdedesign.nl/wat-doen-wij/boeketten.html>

and here:<http://www.ari-soft.com/ARI-Sexy-Lightbox/43718-IE-8-Doesnot-work-well-21-px-top-and-left-overflow.html>

Thanks again for the data-rel solution.  
Let me now if you want to go along with my madness to solve this little thing. otherwise is also just fine... B)

---

Hello you can send my to run a errand. 6 pictures, 2 in xp IE8 and 4 in win7 mode 7,8,9 and 10. Just as I said on IE8 there is Always a x-scolbar in al other modes there is not. I did not yet check the real IE8 browser but now i did. Realy thanks for going allong with this... [http://www.ari-soft.com/images/fbfiles/files/screenshot\\_6x.zip](http://www.ari-soft.com/images/fbfiles/files/screenshot_6x.zip)

## Re:Rel atribute to data-rel conversion?

Posted by Jeroen574 - 2014/05/15 21:34

---

Do you need for the scriptmerge plugin to be turned off or may I turn it on? I don't now how you solve these things on other people there sites so I don't understand If you need to see the files of not? I meaan the css and js files...

=====

## Re:Rel atribute to data-rel conversion?

Posted by Jeroen574 - 2014/05/15 22:04

---

If you use the code the plugin creates in a standaard install In IE10 in IE8 mode you get a empty overlay. But in the real

---

IE8 you do not get a empty overlay there it works like with the altenate code see below. But the x-scrollbar is still there.

Originaal code:

```
;(window || jQuery)(document).ready(function(){
SexyLightbox.initialize({"hoverDownloadLink":false,"enableShow":true,"autoStart":true,"continiousShow":true,"color":"white",
"resizeDuration":50,"dir":"VmodulesVmod_arisexylightboxVincludesVjsVsexyimages","overlayStyle":{"opacity":"0.8"}});
});
```

Alternate code:

```
;(window || jQuery)(document).ready(function(){
SexyLightbox.initialize({"hoverDownloadLink":false,"enableShow":true,"autoStart":true,"continiousShow":true,"continious":
true,"color":"white","pauseDuration":8000,"showDuration":800,"moveEffect":"easeOutBack","resizeDuration":50,"resizeEff
ect":"easeOutBack","dir":"VmodulesVmod_arisexylightboxVincludesVjsVsexyimages","overlayStyle":{"opacity":"0.8"}}); });
```

Here are screenshots of the plugin in IE10 in IE8 mode - IE8 in IE8 and of IE8 in IE7 mode with the Original code. So in IE10 you get a empty overlay... [http://www.ari-soft.com/images/fbfiles/files/screenshots\\_3x.zip](http://www.ari-soft.com/images/fbfiles/files/screenshots_3x.zip)

## Re:Rel atribute to data-rel conversion?

Posted by Jeroen574 - 2014/05/15 22:28

Found Something on this Forum tath solves te slow adjusting the strange behavior the glitch not the x-scrollbar but the movement....

I put this in my IE8 template: It also works with te Original code!

HTML BODY {height:auto;} :woohoo:

So You do not need to help me anymore thanks for all the help.

But maybee you good make it so that the x-scrollbar in IE8 is not pressent in the next version?

This would solve it more perfectly.

Kind Regards,  
Jeroen J.

cloud you please remove the URL's to the my sites? in this ticket? ;)

## Re:Rel atribute to data-rel conversion?

Posted by Jeroen574 - 2014/05/15 22:48

O And it would be verry nice if the next version contance the rel to data-rel min.js file standaard this makes it posible to make it all valid html 5.

Thanks again!

## Re:Rel atribute to data-rel conversion?

Posted by Jeroen574 - 2014/05/16 00:43

:laugh: I just relised how you solved it last time (you do not need to remove this url:)

here:<http://www.terraverdedesign.nl/wat-doen-wij/boeketten.html>

You give it a classname class="sexy-overlay" and put this in the sexylightbox css file: .sexy-overlay{position:fixed !important;width:100% !important;}

I thought I did that but I cant give it a classname because it happens in the jquery.sexylightbox.min.js file!

So that's the way you solved it last time.....

---

I also just relised If you like to.. Good you send me a jquery.sexylightbox.min.js file with both the rel and data-rel part i mean like the one you send my previously and whit a classname?

that is in the source file here:

```
overlay: {  
  create: function(options) {  
    this.options = options;  
    this.element = $("");  
    this.element.css($.extend({}, {  
      'position' : 'absolute',
```

I am going to use the plugin a few times so that would really be handy for my.

A classname is handy then you can address it... And I can put in the css file the code from above that solves it good. No more x-scrollbar YES :woohoo:

Kind Regards,  
Jeroen J.
