
CSV

Posted by Ellsinore - 2014/05/20 02:01

Are there more detailed instructions somewhere on how to configure the CSV for an image gallery? What I have found is that you can add columns, but when I do they don't appear. I'd like to use several more fields, but I haven't been able to figure out how to do it.

I was also wondering if, as an alternative, there's any way ARI Sexy Lightbox can be configured to read EXIF data from the images?

Thanks!

Hello,

You can specify what fields from CSV file will be used in "Choose type -> Image gallery -> Caption template" and "Choose type -> Image gallery -> Layout type -> Simple gallery -> Title param name" parameters.

Currently the extension doesn't show EXIF data.

Hi,

I have just install ARIfancybox and have the same problem with CSV file. The path you indicate for caption is nowhere to be seen in the module settings.

What I am interested in is the following :

Supports possibility for showing additional image parameters (such as description, title and other) which you can define in CSV file;

Hello,

Titles can be defined in CSV file, link to the sample CSV file can be found in "Description" section on module settings. "Title" column is used by default as title for images. If you want to use other column from CSV file for this purpose then specify column name in "Simple gallery -> Title param name".

Revisiting once again, because I cannot get it figured out.

I have the following in my CSV:

```
"File","Title","Description","Contact"
```

The "Title" appears, but not "Description" or "Contact"

I'm guessing I need to add {\$Description} and {\$Contact} in the "Caption Template" field where {\$Title} already appears -- but I can't for the life of me figure out the syntax. Or am I just not even in the right place?

I've been just lumping everything under "Title" with HTML code to display it the way I want to. Unfortunately, that means all that mess shows up as the "Title" of the image when you mouse over it.

Hello,

If you want to show values of "Description" and "Contact" fields under thumbnails, set "Choose type -> Image Gallery -> Caption template" parameter to the following value:

```
{$Description} {$Contact}
```

I actually did try that at some point. It is still only the Title that is displayed. My CSV looks like this:

```
"File","Title","Description","Contact"
"smith_001a.jpg","Image 001a","This is a picture.","Sally Smith"
"smith_001b.jpg","Image 001b","Another picture.","Jane Jones"
```

and my caption template is:

```
{$Description} {$Contact}
```

But the two images only have "Image 001a" and "Image 001b" visible. Is there another setting that I'm missing?

AH! Okay -- I see now that the "Caption Template" renders the information in the Caption (doh!) of the lightbox. And that's working!

I'm trying to find a way to have this information in the title area of the image gallery itself under each picture. Thanks!

It is not possible to combine several fields for titles which are shown into the lightbox.
