
opening evenst with email in lightbox

Posted by corine57 - 2014/06/16 15:08

Hi,

we have the sexy lightbox enabled in our Jevents latest events module, so the events details open in a lightbox - very nice...

but we also have email cloaking enabled in our site,

and as soon as an event decription contains an email adress (for event contact pruposes), the lightbox breaks.

is there a work-around?

kind regards

Corine

Hello,

Could you send a link to a page where the problem occurs?

Hi, there,

thanks for looking into this.

the link is this:

<https://joomla-dev.scouting.nl/evenementen>

you will see two rows with five events.

if you click on the first one, Geuzenhike, you see what goes wrong with the lightbox and the email address that is in the events description.

you can also check out the same events details without lightbox here:

<https://joomla-dev.scouting.nl/evenementen/evenementdetail/17/-/geuzenhike>

the second event, Come together, plus scoutsweekend, works perfectly fine in the lightbox. it has no email adress in the description.

the code I am using in the latest event module to popup the lightbox is this:

`${title}`

kind regards
Corine

Hello,

This problem with "Email cloak" plugin. It can be disable on the selected page if add the following code on a page:

```
{emailcloak=off}
```

okay, so I can leave it on on the rest of the site, just turn it off on the events page, is that what you are suggesting?

thanks!

All right, I have tested this in an article, and there it works.

Problem is, on my page I nly have a module latest events and Jevents component output.

do you happen to know how to work around that?
if I simply insert it somewhere in a module, it will just print the code, not execute

kind regards

The plugin parses this code in articles only.

well, isn;t that too bad, then.

hmm, I will see if I can trick it by using Articles anywhere in a module

thanks anyway.
