Hide Module Mobile Device
Posted by jgowans - 2014/07/07 14:07

_____

Hello,

I'm wondering how to hide the Sexy Lightbox on mobile devices. The template we use is based on bootstrap, so we are able to use the 'hidden-phone' module class suffix, however it does not appear to work on the lightbox module. Is there another solution?

Thank you for you assistance.

Josh

_____

Hello,

Do you use "Module Class Suffix" parameter in module settings and load the module into a module position?

_____

Apologies for late reply. The module class is set to "hidden-phone" and the module itself is in the "offcanvas" position. If I place it in any other position, it displays an empty box in that position.

_____

Is it possible to see the problem?

_____

Currently the pop up can be viewed here. The module position is set to "offcanvas". An alternate pop up can be viewed here. On this page, the module position is set to "top-a"... you should see a blank module to the right of the social icons. This site uses the Warp framework from YooTheme, however even if I set the module to hide on mobile (tablet or phone) in the template settings, the module remains published. Attached is a screenshot of the module class suffix in the module settings. http://www.ari-soft.com/images/fbfiles/images/module_class.png

_____

This is not a problem with module positions. Auto load feature is used for popup and it is activated by javascript and selected module position (CSS class and etc.) is not affected on it.

Ok, so how can I disable it the pop up on mobile phones? It seems that the "hidden-phone" css is not working. Is there another workaround?

_____

It is not possible for auto-opened lightbox. You can use "hidden-phone" prefix if show a link which will call lightbox.
