## Pop Article pre Display

Posted by Achmann - 2014/09/03 04:51

---

Hi, I am trying to imitate a site for a client. What i am essentially trying to do is use the lightbox to display an article, this does work well, however I wish to be able to display a small amount of the article and picture much like a newsflash module, however I would like it appear in the lightbox.

The style imitation comes from <http://www.bankbar.com.au/> click under Whats On!

the site where I am trying to recreate this is

<http://www.brunswickandann.com.au/>

(It is locked)

User: Guest

Pass: pass

I would like the 3 pictured section to all incorporate your brilliant lightbox, however the only thing I can make it do is a simple text link.

Looking under the 3 large icons you will see sample

This is all I can do. I am not sure if this is possible but I am hoping it is possible to intergrate.

Many Thanks in Advance

Achmann

Hello,

You can use a HTML code as a link which will call the lightbox. For example:

```
{arisexylightbox activeType="article" width="800" height="600" id="46" title="Article"}Show article {/arisexylightbox}
```

Regards,

ARI Soft

<http://www.brunswickandann.com.au/index.php/about>

Same passwords, I can't get it to operate properly, I feel i am doing something really stupid, I remember there being a way to stop the CMS from adding

class to the outside of the code.

Check that "System - ARI Sexy Lightbox Anywhere" plugin is enabled and set "Mode" parameter to "Anywhere" in plugin settings.

Ahh thanks. Is there anyway however to get a little blurb of text to appear like the first 20 words or so to appear that the user can then click on??

Almost exactly like the newsfeed module just with the nice fancy lightbox :D

Link text is entered manually, the extension doesn't support ability to retrieve it from article(s).

If you have a module which shows necessary information and contains links to articles, it is possible to attach the lightbox to links using "System - ARI Sexy Links" plugin.
