Droppics coflict with Ari Sexy Thumbnail

Posted by morten44 - 2014/09/24 13:40
_____

Hi Sorry i could not find a thread for Ari Sexy Thumbnail so guess maybe this is the right place

We are using Ari Sexy Thumbnail to get the click function on a picture to enlarge it. ITs working very well

However we also use Droppics with its build in system for enlarge picture, however this has stopped working after installing Ari Sexy Thumbnail

You can se an example on what the problem is here: http://new.adpp-mozambique.org/en/teacher-training-colleges

Its supposed to work like on this site: http://new.norgegir.no/index.php/bli-med/bli-med-som-bistandsarbeider

I contacted droppics support to see if there was a way to igonre the ari code for their slideshow? Here is their answer:
 Hi,

In fact it's not Droppics which need to ignore ARI plugins but ARI needs to ignore Droppics.

I can't do anything as ARI plugins search for all images in the page through a plugin system an replace our content.

You should better ask to ARI's developers how to disable the plugin for some sources folders.
I have tried to find a parameter like that in the ARI plugin configuration but I can't find it.

Best regards.

Damien

So my question is: Is there a way to igonre the ari thumbnail code on some pictures and in droppics. Any code i can enter anywhere for the system ignoring the ari code on some pictures?

Thanks for your time

_____

Hello,

It is possible to use the extension only for images with specific CSS class. Use "Specific CSS classes" parameter in plugin settings for this purpose.

Hi
Thanks for your answer. Sounds like you have throught about everything :)

However i have struggeled for some hours now and not able to get it to work

There are few classes in the article and the only liable one i could possible see is "uk-article"
However this is also used on the droppics pages

This is one where it should work

see http://new.adpp-mozambique.org/en/education

This is one where ari sexy thumbnail should be ignored
http://new.adpp-mozambique.org/en/teacher-training-colleges

The only alternative i can se is maybe if i can get it to ignore where class is "droppics" but i think you only have option to allow classes. not dissalow.
Is that right?

Can you see any soltion on what i should write in the class field?
If not is there a way to add a code to the droppics articles so it ignore the sexy lightbox completely?

Thanks again for your time

Regards
Morten

_____

"Specific CSS classes" parameter accepts CSS class name(s) which are used for images (in tag), not for container element.

_____

Hi Again.
Thanks for your reply
Yea i was afraid something like that. Sounds chineese for me :)
As i see it i need to add codes or something as i cant se any build in classes that i could just add in that field to get it to work only within an article

I did find a solution to to replace droppics with widgikit from yootheme.
That has resolved the image galleries
http://new.adpp-mozambique.org/en/hope

However the module images below the articles in here for exaple
http://new.adpp-mozambique.org/en/education
still load the sexy lightbox instead of the link to the article when image has been clicked

It does not seem to be an easy fix for me on this that I can do myself with my knowledge so I think I will have to look for a replacement thumnail system.
Its a shame as you guys has some great products and i have purchased several of them over some time for my customers.

Thanks again

Regards
Morten

_____

Is it suitable if we add ability to ignore images from specific class name or from selected folders?

Regards,
ARI Soft

_____

Hi
Thanks again.
I think one thing that would help would be if some folders within \images\ could be ignored.
This will allow user to decide what images the box should not apply to

Maybe it would work with ignore classes as well but maybe more will have it like me, not knowing how to add classes to images so they can be ignored.

Of course it depends on how much much work it is for you and if you feel it will benefit more people.

F.eks at the moment when activated even the "banner" pops up when clicked on instead of activate the link back to homepage

I have just deactivated the plugin now as the NGO i am helping to make a website is going to look at it tonight

Thanks again for coming back to me

Regards
Morten

_____

We have updated the extension. "ARI Sexy Thumbnails" plugin v. 1.11.4 contains "Ignore folders" and "Ignore sub-folders" parameters. They can be used to ignore images from the selected folders. For example if want to ignore images from /images/avatars folder, set "Ignore folders" parameter to images/avatars value.

The latest version of the extension is available in "Member Area". Update "ARI Sexy Lightbox" module and "ARI Sexy Thumbnails" plugin.

Regards,
ARI Soft

_____

Hi
Wow that was fast
I have tested the funtion and it works great on preventing ari thumbnail to run on folders and subfolders. I have tested the 2 things

I can see that the droppics system still does not work
If i look at the source code of the article that contain the droppics code it looks like this:

Teacher Training Colleges introduction text

This despite the physical files is stored in /images/com_droppics/123 (1 number pr album)

I guess the reason why its not working is because the code above actually does not even look in the /image folder

Is there a solution to this you think?
If not its not a very big problem as I can use Widgikit instead of Droppics with more or less the same result.
I am really happy for what you have done as it makes it possible for me to continue to use this fantastic plugin
(if you need access to the site please let me know)

Kind Regards
Morten

_____

Try to add components/com_droppics/assets/images path to "Ignore folders" parameter.

_____

YES!!!
IT works
Thanks alot for all your help on this one and adapting the features in the way that you have done.

Its the best customer service I have ever experienced.
I will run to Joomlas website and give the best review ever

Thanks alot.
Everything working as a sharm

Kind Regards
MOrten
