Deactivate Table?

Posted by MHAVA - 2014/09/26 11:52

_____

Hi,

I'm using the Plugin for a display of a few images under an article, this is my code:

{arisexylightbox activeType="imglist" thumbHeight="100" dir="images/GOTM/1409"}{/arisexylightbox}

It displays thumbs in a table, the images don't fit and the table is way too big.

How can I deactivate the table, I just need a row of the thumbnails next to each other that open in the Lightbox when clicked on.

Kind regards,
Michael

Hello,

It is possible to use "itemCount" attribute to increase number of images per row. For example use the following plugin code:

{arisexylightbox activeType="imglist" thumbHeight="100" dir="images/GOTM/1409" itemCount="999"}{/arisexylightbox}

Hmm, that's not exactly what I'm looking for, the table form is still there.

I think I need to use the "Inline Images" setting instead of "imglist".
But i can't get that to work properly, thumbs are now under each other and of bad quality?

Is there no option to show inline images from a directory as a plugin-code (instead of html), like with "imglist", but no table around the thumbs? Height or Width adjustment would be more than enough.

Michael

_____

Currently the extension can show images from folder(s) in a table, but it is possible to change table parameters to remove padding, margin and other parameters. Could you provide a link to a page with images and an image where we can see what do you want to achieve? You can send it by email.
