
display screenshot during loading of video

Posted by consultnet - 2014/12/29 11:32

Hi,
I am using Sexy Lightbox only to display a video on my website. The video takes quite some time to load. Whilst loading the lightbox is completely empty and users are very likely to close the box because they think that the system has crashed or is hanging. To avoid this I want to display a background picture or - even better - a loading bar. How can I do this?
Thanks,
Uwe

Hello,

The extension doesn't support this ability, but thank you for your suggestion. We will investigate possibility to implement it and try to add it into a future version of the extension.

Regards,
ARI Soft
