sexylightbox ini file errors special chars in name

Posted by chewk2 - 2015/03/26 19:37

_____

I am using the ini file to title the images. Unfortunately, I have jpg files that are being produced by a camera ftp where the built in filename contains characters like "()". this throws an error in class.apputils.php on the parse_ini_file call.

Is it possible to escape or otherwise use image filenames that contain special characters that are not supported by the parse_ini_file function?

I unfortunately don't have access to the firmware of the camera to change the filenaming algorithm.

Ideas?

thanks,
Jim

_____

Hello,

The extension uses CSV file to get titles and descriptions if image gallery is created with help of "ARI Sexy Lightbox".

Regards,
ARI Soft
