## Ari code is shoing not link

Posted by Basstrup - 2010/07/13 18:12

---

on the site

this shows when browsing the site

```
{arisexylightbox moduleID="64"}{/arisexylightbox}
```

The plugin is enabled

I am using rel="sexylightbox" on images on other pages of the site.

any suggestions?

thanks <http://www.ari-soft.com/images/fbfiles/images/Picture1.png>

Hello,

At first, correct code should look like:

```
{arisexylightbox moduleId="64"}{/arisexylightbox}
```

In other words, use moduleId instead of moduleID. The second, if you use WYSIWYG editor, switch to plain text mode and check that an editor didn't add extra HTML tags to plugin code.

PS: If you have any difficulties, you can provide temporary access to your Joomla! backend by email and we'll help you.

Regards,  
ARI Soft
