Not getting lightbox to work properly
Posted by DigDug - 2015/05/16 21:38
_____

I used this in Joomla 2.5 and had no problems, but in Joomla 3 I cannot get the images to show up. Only links. I also had image links at least showing up in a box when clicked but I messed things up and it is no longer doing this. Is there any tips for fixing these issues?

The link is: http://weblynx.co/weblynx.co/index.php/portfolio/java-projects/13-java-projects

Thanks so much!

J

Hello,

Check that you use the latest version of the extension and set "Include jQuery" parameter to "Yes" and "Load jQuery Method" parameter to "Local copy" value in module/plugins settings.

Ok..I have all the setting changed. I did have the Jquery parameter set right but not the "load jQuery Method." However, I still have links unless I disable the sexy thumbnails plugin.

The images that aren't resized seem to show up ok, but not the resized ones.

Thanks! :D

Hello,

Set writable and readable permissions for /cache folder.
