
Lighbox not firing after ajax call

Posted by Macjohn - 2015/05/23 22:28

I am using the lightbox by:
Which is working fine on initial load.

However, I have a menu which loads new content (and new images to be shown in the lightbox) via an ajax call.

When the ajaxcall has appended the new content - the lightbox does not fire anymore.

Can I re-initiate the lightbox somehow, after my ajax call? (Im guessing that must be the problem?)

Thanks
John

Hello,

When a new content is added it requires to initialise the lightbox for this content. Call the following javascript code:

```
if (typeof(SexyLightbox) != "undefined") SexyLightbox.refresh();
```

Regards,
ARI Soft
