
PB Setting up Lightbox

Posted by nadine whelan - 2010/07/15 16:36

Hi

I just purchased the lightbox, I installed everything fine I want to load a module in lightbox I had the code :

```
{arisexylightbox activeType="module" width="300" height="250" id="176" link="Show Joomla! module" title="Joomla! module"}{/arisexylightbox}
```

But it doesn't work, nothing is showing on the page.

Could you please tell what I have done wrong, and if possible give me access to your demo backend to see how to do it.

Kind regards

remi

Hello,

Could you provide link to page where we can see this issue? Or if you can provide temporary access to your Joomla! backend by email we can investigate and resolve this issue in the shortest period of time.

Regards,
ARI Soft
