[thumbnails] img width 100%
Posted by uripress - 2015/08/25 13:54

_____

i use your great thumbnail-plugin and a problem appears.

i use images like:

and the thumbnails-plugin resizes the pictures to:

than the image is not fullwidth of the upper div anymore. its only 100px width.
is there a option to prevent this?

_____

Hello,

"ARI Sexy Thumbnails" require absolute value for "width"/"height" parameters. If you want to add an image to ignore list
for the plugin, add "nothumb" CSS class to this image. It will look like:

_____

nice, thank you.
but when i add nothumb class, the lightbox doesnt work anymore on the image too.
is it possible to activate the lightbox itself, and deactivate the thumbgeneration on a single page or aa single image?

(i tried '...class="nothumb" rel="sexylightbox"...' without success - i know, the rel attribute ist for hrefs, but i love the
function, arilightbox autogenerates the lightbox links on images. so i dont need to insert the image and the link to image
on the image and add the rel and nothumb classes)

_____

The extension doesn't support this ability.

_____

As possible solution, you can use "System - ARI Sexy Lightbox" plugin and wrap the image with tag. It looks like:

_____

ok, thanks again.

so, which solution would you prefer to use lightbox&thumbnail plugin on a responsiv page?
i just ask again, because wont generate the thumbs and wont optimize the traffic.
and when i make a responsive webpage, i need to use the width on images instead the px, dont i?

_____

It is possible to use both plugins together because they are used for different purposes.
