Popup lightbox target issue..

Posted by SBS_JR - 2010/07/31 07:41

_____

Hello again.. So I bought this mod yesterday and it works great! well done, but I have one issue.. When I open another module with the lightbox the links can vary on how they are setup on my end, is it possible to force all links in the lightbox to open in the parent window? Right now I am having issue with them opening in the lightbox. thanks for your help again..

Hello,

Could you provide link to page where we can see the problem? It helps us find solution.

Regards,
ARI Soft

_____

One more question, do you want to display links in this way:

http://www.elementsbyksorbe.net/index.php?option=com_jcalpro&Itemid=52&extmode=view&extid=7

or in this way:

http://www.elementsbyksorbe.net/index.php?option=com_jcalpro&Itemid=52&extmode=view&extid=7&tmpl=component

Regards,
ARI Soft

This also might be a good thing to add to options of the module is an option to pick force all link's targets to parent, blank, self and so on....

We'll create new plugin which will update links. In your case, you want to show page from CalPro component and this component creates component view links (add tmpl=component variable to links) and that the lightbox will work as you want, it requires to modify link and target. We'll provide plugin within 24 hours.

Ok I have installed the plugin and enabled it, turned on parent window and component view turned on...

Used these links for the two bottom modules..

Modules are using module method with those two links..

And Ive tryed the various targets, new, parent, top.. none seem to work, always opens in its own window..

Did I miss something? Also is it possible to not use sexy in the address line from the plugin?

Thanks,
Jr

_____

Could you provide temporary access to your Joomla! backend by email that we can investigate this issue, it can be problem with JCalPro component because it adds some parameters to links for core Joomla! lightbox.
