
Continuous slide show

Posted by rossandev - 2010/12/16 04:06

The sexy lightbox slide show stops after it has shown all the images in the folder, how do I set it to have a continuous feed?

I love the effect with the carousel..... :S

Hello,

Currently the extension doesn't provide this ability, but we will implement it within 24 hours.

We have updated the extension. New version contains new parameter "Continious Slide Show" which provides possibility to show items in slideshow mode from last to first. You can download the latest version in "Member Area" on our site.

When the slideshow is OFF, it is not possible to swich the slideshow to continuous. meaning that when you use the slider controls there is an end suddenly.

Hello,

Currently "Continious Slide Show" parameter works only in slide-show mode. If it is needed for arrow navigation, we can adjust the extension.

Download and upgrade the module and the plugin(s) if you use them. New version contains "Continuous navigation" parameter. If this parameter is enabled the extension will show lightbox items in unlimited way.

not really, i have the latest version i think and i have the button however it doesnt work with the slideshow switched off. I feel you misinterpret me,

Try pressing the < or > arrows left & right in the highlight box plugin working in conjunction with the ARI cloud carrousel. At some point it stops and you cant push any further like an end.

v 1.73 fixes it. thanks for the great support!

-Recommendation, where would you like it??
