I changed the article for public access, now it is working!

<http://www.thappana.com/component/content/article/192-show-an-article-in-light-box>

wonder why it did not work earlier? The section and category were special that time!  
What you think?

Thumbs up!  
Thank you.

It couldn't work if incorrect plugin code were used or it was a conflict with a 3rd party extension.

---

My idea is to display scanned images of epapers. I thought of using ari sexy light box anywhere slide show to show the popup images. But the popup images are resized to fit the screen. Is there any way to show the image as original size and user can scroll down to read the entire photo!!

Please give the code for that

---

Download and upgrade "ARI Sexy Lightbox" module and "System - ARI Sexy Lightbox Anywhere" plugin please. New version of the extension contains new parameter "Image gallery -> Keep image size". Set it to "Yes" that the module shows images in lightbox with original size. If you use the plugin, add keepSize="1" parameter to {arisexylightbox} tag. If you have questions or need additional assistance, let us know.
