
Can ARI ColorBox be triggered from link?

Posted by mijeka - 2010/04/07 02:35

I got a page with a smooth image inline fader slideshow going through just a few pictures. Now i want a gallery with a bigger picture-range to popup in the nice ARI ColorBox popup:

I could accomplish this with the code:

```
{aricolorbox moduleId="88"}{/aricolorbox}
```

and setup the module to show only one image of the gallery on page, so instead of a smooth fade image slideshow, i only got one static picture that can link to the ColorBox gallery.

Before i had some experiment with JCE MediaBox accomplished with the code:

```
{besps}gallerypath|width=260|height=195|caps=0{/besps}
```

Where:

```
{besps}gallerypath|width=209|height=300|title="{/besps}
```

Is the smooth fade slideshow in page. But i don't like the layout design of the JCE MediaBox and kind of fell in love with the ColorBox theme5. Also it has, what MediaBox doesn't have: The auto slideshow in popup mode.

Is there some way to "wrap" the linking of ColorBox around this inpage fader slideshow? :huh: So that when the user clicks somewhere on the slideshow plus some link text below it will trigger the Colorbox popup?

=====

Hello,

We have updated "ARI Colorbox". New version contains "Custom text" layout type for "Image Gallery" and "Flickr Gallery". You can place necessary text or HTML code in "Custom text -> Template" textarea and if an user clicks by this text, popup will be shown. You can download the latest version of the extension in "Member Area" on our site.

Regards,
ARI Soft

Hello ARI Soft

Thanks very much for your excellent support the "Custom text" function is working very well for my needs.

To try to repay your efforts i would like to submit some issues that are likely to be bugs, so i start another thread: "Bug reports"

Thank you and regards
Mikael
