
No Graphic Border in IE

Posted by subster - 2010/06/07 16:30

Hi there,

thank you for the fantastic support in the past. Here is a new issue i just recognized today.

When i open the lightbox with this nasty thing called IE the lightbox has not that pretty graphical border, which it has normally in FF and every other browser.

Any idea?

Hello,

Provide link to page where we can see it, please, and say what theme you use.

Regards,
ARI Soft

Hi there,

i use the plugin, and uploaded the files of it (not anywhere), but still no change.

How shell i do the update?

No matter what you use the plugin or the module. Upgrade 'ARI Colorbox' module because it contains necessary updated files. Open Joomla! installation page and install the module again. Joomla! installator upgrade all necessary

files. Upgrade process doesn't require to uninstall the previous version of the module.
