
Overlay Thumbs

Posted by kidda media - 2011/05/10 05:49

Hi

Love the module and is working perfect aside from one issue I am hoping can be resolved

Within the popup lightbox the overlay thumbnails that are generated are acceptable for Landscape shots but look awful for Portrait shots because of the cropping that occurs.

The site is for showcasing sculptures so a decent thumbnail is kind of important and my client is not happy as it is ...

Can this be resolved?

Hello,

Currently overlay thumbnails can work only in this way, but we will improve this functionality in a future release.

Do you have any idea when this will be released as it really is quite poor as it stands and is not immediately obvious as an issue prior to purchase?

Also I would like to move the position of the overlay thumbs to the bottom left and remove the 1 of 3 etc , what files do I need to amend to do this?

Could you specify what theme you use and if possible provide screenshot where we can see what you want to achieve?

PS: We will try to improve overlay thumbnails within 3 days.

Regards,
ARI Soft

Thanks very much made mine and my clients day, how do you download teh new release and install? Do I have to uninstall and lose my galleries?

Regarding what I am trying to do please see the screenshot below ... hope its clear and once again appreciate the assistance

Upgrade process doesn't require to uninstall previous version of the extension. New version is installed over old version through standard Joomla! installation page, but if you change any core extension's files, changes will be lost.

About required modifications, add the next CSS rule to site template file that hide "1/3" message:

```
P.currentTextHolder
{
    display: none !important;
}
```

Changing position of overlay thumbnails container required modification of jQuery plugin (javascript code) which is used by the extension. We can provide source of the plugin if you want to change it.

PS: BTW, provide your order number by email, please, because we can't find any order associated with your account.

Regards,
ARI Soft

The module has been updated. New version should show "portrait" images properly.
