_____

I am using joomla 1.5

is there any documentation some place that actually shows how to use ARI Pretty Photo, what needs to be typed, where needs to be typed, etc, etc, etc?

_____

Hello,

Documentation can be find in module or plugin settings page:

 http://www.ari-soft.com/images/fbfiles/images/lightbox_documentation-f820994110ad2c488eef4fcf5e4f61f7.jpg

Code of "ARI Pretty Photo Anywhere" plugin can be placed in an article or in any content if "Mode" parameter is set to "Anywhere" in plugin settings.

Regards,
ARI Soft

_____

Hi,

that documentation explains all the fields, but i can't find in any place the way to implement the plugin and/or module.

For example, something like:

If you want to include an image in an article, you have to add the code "............." to the article, but first you have to install "this plugin" and be sure it's enabled.

To do "this", you will need to include the following code "....................." in "...................", and the module "............." needs to be installed and enabled.

_____

Each plugin and the module from extension's package contain link to documentation in "Description" filed on settings page. Documentation contains sample of code and description of all available parameters for plugins. If you want to use specific plugin from extension's package, it should be installed and enabled.

PS: The plugins require installed "ARI Pretty Photo" module. This fact is described in readme.txt file from extension's package.

Regards,
ARI Soft

_____

Hi,

we should have a 'documentation section' in the forum as well.

and a 'tutorial section' too.
