## applying prettyphoto to one image

Posted by eliecer - 2011/07/02 01:49

---

Hi there,

I am using Joomla 1.5, and i need to know what code I should use to display an image from a thumbnail.

I wanna show my twelve thumbnails in 3 rows and 4 columns (inside an article). Also, once one of the images is opened, I want the user be able to jump into the next image without be closing the actual popup window.

NOTE: I don't want thumbnails inside the popup window.

Thanks

=====

Hello,

Do you want to automatically generate thumbnails for images from specific folder(s) and show them in 3x4 table or you mean something another?

About thumbnails in lightbox you can read [here](#).

Hi,

I wanna try both for future applications.

- 1) - automatically generate the thumbnails from a folder
  - 2) - link a bigger image to a thumbnail

---

1. Use the next code:

Install "ARI Pretty Photo" module, then install, configure and enable "System - ARI Pretty Photo Anywhere" plugin and place the next code into an article if you want to show images from /photos/album1 folder:

---

```
{ariprettyphoto activeType="imglist" thumbWidth="100" dir="photos/album1"}{/ariprettyphoto}
```

2. Install "ARI Pretty Photo" module, then install, configure and enable "System - ARI Pretty Photo Anywhere" plugin and place the next code into an article:

```
{ariprettyphoto thumbWidth="150"}
```

```
{/ariprettyphoto}
```

Where LINK\_TO\_LARGE\_IMAGE is link to large image.

PS: One note, if you use a WYSIWYG editor, switch it to plain text mode before inserting plugin code because WYSIWYG editors can add extra HTML code in design mode.

Hi,

The second code is working properly, but the first one is giving me an empty page.

Could you provide link to page where we can see the problem and temporary access to your J! backend by email that we can investigate the problem?

Hi,

Let's say I have a small picture (the moon), and once i click on it, i wanna see a different big picture (the sun).

How can i implement it considering that the thumbnail is not the image i wanna see in big?

The next HTML code can be used for "System - ARI Pretty Photo" plugin:

---

Where LINK\_TO\_THUMBNAIL is link to thumbnail, LINK\_TO\_LARGE\_IMAGE is link to large image.
